## Letter from the Administrator

Wisconsin's child welfare system operates with a goal of achieving the following outcomes for all children, youth and families who are touched by our system:

- Children are cared for in safe, permanent, and nurturing families who have the necessary skills and resources to provide for their physical and mental health, behavioral and educational needs.
- Through effective intervention, parents, caregivers, and families improve their ability to develop and maintain a safe, stable environment for their children.
- Children are safely maintained in their own home, families and communities with connections, culture, and relationships preserved and established. When it is necessary to place children in out-of-home care, it is a safe, short and stable experience.

To achieve these outcomes, we are committed to key values and principles, including safety, permanence, stability and well-being for children; strength-based family-centered approaches; respectful interactions with families; cultural competency; and partnership between the child welfare system and families and communities.

The child welfare system has a comprehensive set of standards as well as guidance for case practice. We hold ourselves accountable to the highest standards of practice, and seek to self-correct, innovate and enhance our ability to achieve positive outcomes through continuous improvement.

We believe that it is important to utilize data to manage and evaluate the performance and outcomes of the child welfare system and to make sound policy and program decisions that will serve to improve the quality of services to children and families. This report provides a rich source of data to be used by our stakeholders and the Department to deepen our understanding of the outcomes and trends in Wisconsin's child welfare system.

Thank you for your interest in learning more about Wisconsin's child welfare system. It is our hope that the information in this report will inform efforts to prevent abuse and neglect and better protect children who have been maltreated or are in unsafe homes. We appreciate your continued support for our efforts as we strive to ensure that families are stronger as a result of being involved in our child welfare system.

Fredi-Ellen Bove  
Administrator

## **Executive Summary**

In calendar year 2012, county Child Protective Services (CPS) agencies and the Bureau of Milwaukee Child Welfare (BMCW) received a total of 70,266 referrals from reporters alleging maltreatment of children. Law enforcement, social service workers, and educational personnel accounted for the largest sources of CPS reports. A total of 26,309 of these CPS reports, or thirty-seven percent, were screened-in by CPS agencies for further assessment. These screened-in reports could involve multiple children within each report, and together they accounted for 24,953 CPS initial assessments of families. At the child-level, there were 39,460 CPS maltreatment reports involving 33,289 children and 44,228 allegations of maltreatment. Some children were involved in more than one report and/or were affected by multiple allegations of maltreatment.

### **Allegations and Findings**

Neglect was the most common type of maltreatment allegation during calendar year 2012, followed by physical abuse, sexual abuse and emotional abuse. Of the 39,460 CPS maltreatment reports, 5,060 were substantiated allegations of maltreatment, representing 13 percent of the total. The maltreatment allegation types accounting for the most substantiated findings during calendar year 2012 were neglect and sexual abuse.

### **Child Victims**

There were 4,537 unique child victims of maltreatment in 2012. A child is a victim if he/she had at least one substantiated maltreatment finding at the conclusion of a CPS initial assessment. This represents 3.4 children per 1,000 children in Wisconsin. Females were more likely to be victims than males due to higher rates of sexual abuse. In calendar year 2012, CPS agencies reported 23 children died from substantiated maltreatment.

### **Maltreaters**

Roughly equal numbers of males and females were maltreaters in 2012. However, males accounted for the majority of maltreaters in sexual and physical abuse cases, while females accounted for the majority of maltreaters in neglect cases. Primary caregivers accounted for 83 percent of the substantiated maltreatment.

### **CPS Services**

Of the families involved in CPS initial assessments during calendar year 2012, 17 percent of families received services from the CPS agency and 21 percent were referred by the CPS agency to a community resource. During 2012, 2,578 children were removed from their family home and placed in an out-of-home placement during the CPS initial assessment in order to ensure child safety.

### **Data Source**

Data for this report is from the electronic Wisconsin Statewide Automated Child Welfare Information System (eWiSACWIS). CPS agencies use eWiSACWIS to manage their cases. The body of the report provides statewide composite data and county-specific detail is in the appendices.

## Introduction

Child Protective Services (CPS) is a key component of the Child Welfare System. CPS intervention is warranted whenever there is a report that a child may be unsafe, abused or neglected, or at risk of maltreatment. The purpose of the CPS system is to identify and alter family conditions that make children unsafe or place them at risk for maltreatment. Services provided by CPS agencies include receiving reports of alleged child maltreatment, assessing these reports as needed, implementing plans to keep children safe, and coordinating services for children and families where maltreatment has occurred or children are assessed to be unsafe.

Wisconsin's CPS programs strive to achieve the following outcomes for all children, youth and families who are touched by our system:

- Children are cared for in safe, permanent and nurturing families who have the necessary skills and resources to provide for their physical, mental health, behavioral and educational needs.
- Through effective intervention, parents, caregivers and families improve their ability to develop and maintain a safe, stable environment for their children.
- Children are safely maintained in their own home, family and community with connections, culture and relationships preserved and established; when it is necessary to place children in out-of-home care, it is a safe, short and stable experience.

This Wisconsin Child Abuse and Neglect Report reflects data collected during calendar year 2012 regarding reports of child maltreatment in Wisconsin. This report has been compiled by the Department of Children and Families to assist state policymakers, service providers and the public in understanding and effectively responding to trends in child maltreatment.

## Structure of Child Protective Services in Wisconsin

CPS agencies are responsible for identifying and addressing conditions affecting child safety in the home for families who come to the attention of these agencies. In Wisconsin, this critical social responsibility is met through a state-supervised, county-administered system, with the exception of Milwaukee County where the state administers the CPS program. Alleged child maltreatment is reported to 71 county social or human services departments in the state and to the Bureau of Milwaukee Child Welfare (BMCW) in Milwaukee County or to local law enforcement agencies. Alleged child maltreatment involving tribal children is also reported to county CPS agencies and the BMCW or to local law enforcement; CPS agencies and the BMCW are required to notify the tribe of the referral within 24 hours of its receipt. Please refer to **Appendix M** for a complete list of contact information for these county departments.

## Child Abuse and Neglect Definitions

State laws define child abuse and neglect. These definitions provide the basis for persons to report suspected child maltreatment and guide county agencies in their response. Throughout this report, the terms 'child maltreatment' and 'child abuse and/or neglect' have the same meaning and can be used interchangeably. Refer to **Appendix A** for a list of Wisconsin's child maltreatment related statutes. State laws and policies concerning child maltreatment pertain to children 17 years of age and younger, unless otherwise specified.

Child maltreatment is generally divided into four basic types: neglect, physical abuse, sexual abuse and emotional abuse.

**Neglect** is defined in the statutes as, “failure, refusal or inability on the part of a caregiver, for reasons other than poverty, to provide necessary care, food, clothing, medical or dental care or shelter so as to seriously endanger the physical health of the child.” [Ref. s. 48.02(12g), Wis. Stats.]

**Physical abuse** is defined as, “physical injury inflicted on a child by other than accidental means.” [Ref. s. 48.02(1)(a), Wis. Stats.] “Physical injury includes but is not limited to lacerations, fractured bones, burns, internal injuries, severe or frequent bruising or great bodily harm, as defined in s. 939.22(14).” [Ref. s. 48.02(14g), Wis. Stats.]

**Sexual abuse** is defined by cross-referencing several crimes in the Wisconsin Criminal Code section of the statutes (see **Appendix A**). In summary, sexual abuse includes but is not limited to the following:

- sexual intercourse or sexual contact with a child 15 years of age or less;
- sexual intercourse or sexual contact with a 16- or 17-year old child without his or her consent;
- inducement of a child to engage in sexually explicit conduct in order to videotape, photograph, etc., that child or videotaping, photographing, etc., a child for such purposes, or producing, distributing, selling or otherwise profiting from such a videotape, photograph, etc.;
- encouragement by or permission of a person responsible for a child's welfare for a child to engage in sexually explicit conduct for the purpose of videotaping, photographing, etc.;
- causing a child to view or listen to sexual activity;
- exposing genitals to a child; or
- permitting or encouraging a child to engage in prostitution.

**Emotional abuse** is defined as, “emotional damage for which the child’s parent, guardian or legal custodian has neglected, refused or been unable for reasons other than poverty to obtain the necessary treatment or to take steps to ameliorate the symptoms.” [Ref. s. 48.02(1)(gm), Wis. Stats.]

The definitions of neglect and emotional abuse involve failure on the part of parents or other persons responsible for a child to provide necessary care for a child. The definitions of physical abuse and sexual abuse include harm to a child by any person. Therefore, physical or sexual abuse of a child can include assaults by a parent, strangers, persons unrelated to a child’s family, or peers.

In many of these cases, in addition to the CPS assessment, law enforcement is involved and criminal prosecution of the person who harmed the child may occur. However, in most child abuse and neglect cases, the parties involved are family members and solutions involve CPS interventions with the family. In some of these cases, court intervention is required to assure safety for the child and to order services for the family.

Wisconsin statutes define unborn child abuse as another form of child maltreatment. [Ref. s. 48.02(1)(am) Wis. Stats.] Due to the unique nature of this maltreatment type, unborn child abuse data is excluded from the body of this report and presented separately in **Appendix B**.

## **Overview of the Child Protective Services Process**

CPS agencies follow numerous state and federal policies and practice standards as they strive to keep children safe from harm. The CPS process can be divided into three parts: CPS Access, CPS Initial Assessment, and CPS Ongoing Services. The section of this report entitled the 'Child Protective Services Process' provides further detail about CPS Access and CPS Initial Assessment. The section of this report entitled 'Services to Families' addresses CPS Ongoing Services. **Appendix C** shows an overview of the CPS process in Wisconsin, with a flowchart illustrating the different paths a child maltreatment report may take.

During CPS Access, the agency receives information about suspected child maltreatment from community sources referred to as 'reporters'. Based on this information, the agency determines if the report constitutes an allegation of child maltreatment or threatened harm as defined by Wisconsin statutes. If an allegation rises to this level the report is screened-in for further assessment, and if it does not, the report is screened-out. At this stage, screened-out CPS reports are no longer part of the CPS process. However, the CPS agency may still refer the family to community services or offer to provide voluntary agency services to address family concerns not related to child safety.

All screened-in CPS reports move on to the next stage of the CPS process, CPS Initial Assessment. Based on all the information gathered as part of the CPS Access process, the CPS agency designates a response time, ranging from an immediate response to within five days, by which an initial face-to-face contact with the child/family must occur.

The primary purpose of the CPS Initial Assessment is to assure the child's safety and determine whether the child and family are in need of services to keep the child safe. The CPS Initial Assessment generally involves interviews with the child, family, and other individuals closely involved with the family. Based on information gathered through the CPS Initial Assessment, the agency determines whether one or more types of abuse have occurred. The CPS agency must make a finding for all allegations unless critical information sources are unavailable for interview.

In addition, the information is used to make decisions about child safety. If a child is unsafe, the CPS agency must develop a plan to address child safety and open the case for ongoing CPS services. Depending on the situation, the family involved may voluntarily participate in CPS services or be court-ordered to participate. If the safety decision is that the child or children present in the home are safe, the case may be closed. The CPS agency may still offer/refer the family to other community services or voluntary services within the agency to address other concerns not related to child safety.

## **Alternative Response**

While in Wisconsin all CPS cases require a comprehensive assessment in order to assure that children are safe and protected, not all cases need a maltreatment and maltreater

determination for the family to receive services. In fact, these determinations may interfere with service provision by creating an atmosphere that feels adversarial for families.

For reports that have been screened in for a CPS response, initial assignment to a 'traditional response' or 'alternative response' depends on an array of factors (e.g., presence of imminent danger, level of risk, the number of previous reports, the source of the report, and/or presenting case characteristics such as type of alleged maltreatment and age of the alleged victim). Assignment to the traditional or alternative approach can change based on new information that alters safety threats or levels of risk.

Reports assigned to receive an 'alternative response' are CPS cases and receive the same prompt and active attention as a 'traditional response'. These are not low priority cases; rather they can be served more effectively with a supportive, collaborative approach.

To develop the most appropriate, most effective, and least intrusive response to reports of child abuse or neglect, the legislature authorized a pilot of an 'alternative response' approach to child protective services in a limited number of counties. Wisconsin's 'alternative response' pilot program was launched in July of 2010 in Milwaukee, La Crosse, Marathon, Eau Claire, and Pierce counties. In January, 2012, eight more counties were added: Barron, Chippewa, Dodge, Douglas, Langlade, Sauk, Waushara, and Winnebago counties.

The Department of Children and Families Division of Safety and Permanence collects data related to the impact and effectiveness of the alternative response pilot. The initial results of that data collection were reported to the Legislature in July of 2012.

## Key Terms

This section provides a brief review of key CPS terms. Further contextual understanding of these terms can be gained by reading the narrative in each section of this report.

**Alleged Maltreater:** A person, in a screened-in referral, who is asserted to have committed one or more maltreatment acts against one or more children.

**Alleged Victim:** A child with one or more maltreatment allegations in a screened-in referral that have not yet been assessed.

**Child Victimization Rate:** The number of unique children who were victims of substantiated maltreatment out of a population of 1,000 children. The child victimization rate is calculated by dividing the total number of unique children who were victims of substantiated maltreatment by Wisconsin's total child population.

**CPS Agency:** The county social or human service department or the Bureau of Milwaukee Child Welfare responsible for addressing concerns related to child safety in the home for families who come to the attention of these agencies.

**CPS Report:** Each child identified in a screened-in referral as an alleged victim of maltreatment or threatened maltreatment is considered one CPS report. One CPS report can have multiple allegations involving the same child.

**Impending Danger:** A foreseeable state of danger in which family behaviors, attitudes, motives, emotions and/or situations pose a threat which may not be currently active, but can be anticipated to have severe effects on a child at any time in the near future and requires safety intervention.

**Initial Assessment:** A comprehensive assessment conducted in response to reports of alleged child maltreatment. A CPS Initial Assessment is completed in order to: assess and analyze present and impending danger threats to child safety; take action, when necessary to control threats to child safety; determine the need for CPS Ongoing Services (court-ordered or voluntary); determine whether maltreatment occurred; and assist families in identifying useful community resources. The term CPS Initial Assessment includes the CPS investigation process as defined in s. 48.981(3)(c), Wis. Stats.

**Initial Assessment Disposition:** The action taken by the CPS agency on the family's case (e.g. case opened for CPS services, case closed, etc.) as a result of a decision regarding child safety and the Initial Assessment finding.

**Initial Assessment Finding:** The overall maltreatment finding for the family, upon completion of the CPS Initial Assessment, of whether abuse was substantiated, unsubstantiated, or unable to locate sources of information and/or subjects of the report - unsubstantiated.

**Maltreater:** A person, who after the CPS Initial Assessment of a screened-in referral, has had at least one allegation of child maltreatment found to be substantiated by the CPS agency.

**Maltreatment Allegation:** An assertion of one type of child abuse or neglect involving one or more alleged maltreater(s) for a single alleged victim. For the purposes of this report, maltreatment allegations are one of four types: neglect, physical abuse, sexual abuse, or emotional abuse.

**Maltreatment Finding:** The CPS agency's determination of whether a maltreatment allegation has occurred or not (substantiated or unsubstantiated). If critical sources are unavailable for interview and it is impossible to make a finding, the maltreatment finding is, "not able to locate sources of information and/or subjects of the report – unsubstantiated."

**Present Danger Threats:** An immediate, significant and clearly observable family condition that is actively occurring or 'in process' of occurring at the point of contact with a family and will likely result in severe harm to a child.

**Reporter:** Person who contacts a CPS agency with information regarding alleged maltreatment of a child or children.

**Safety Assessment and Analysis:** Information gathered by the agency during the CPS Initial Assessment and throughout the life of the case pertaining to whether the conditions present in the home make the child/children living in the home safe or unsafe. The results of the safety assessment and a safety analysis of the family environment are used to inform the safety decision.

**Safety Decision:** The CPS agency's determination of whether a child is safe or unsafe based on the safety assessment and analysis. If the home is unsafe, the CPS agency implements a safety plan to assure the child is safe and protected. If the home is safe, the CPS agency may refer the family for voluntary CPS services or other community services, as needed.

**Screened-in Referral:** One or more allegations of child maltreatment in the referral (which may include one or more children in a family) that have been deemed as rising to the level of maltreatment or threat of maltreatment as defined by Wisconsin statutes and therefore must be assessed.

**Screened-out Referral:** All allegations in the referral are deemed as not rising to the level of maltreatment or threat of maltreatment as defined by Wisconsin statutes. No further assessment of the allegation is required. The family may be referred for voluntary CPS services or other appropriate community services.

**Substantiation:** The information gathered during the CPS Initial Assessment provides a preponderance of evidence (that is, the proof shows that the fact sought to be proved is more probable than not) that the maltreatment allegation made in the CPS report or identified during a CPS initial assessment has occurred. In general, a known maltreater is substantiated for the maltreatment; however, an allegation can also be substantiated when the maltreater is unknown or not identified.

**Victim:** A child who had at least one of the maltreatment allegations found to be substantiated as a result of a CPS initial assessment.

## Child Protective Services Process

This section reviews the process counties undertake when they receive an allegation of child abuse and/or neglect. Please refer to **Appendix C** for a diagram of this process.

### Child Protective Services - Access

As shown in Table 1, during calendar year 2012, CPS agencies received a total of 70,266 referrals; 43,957 of these were screened-out and 26,309 were screened-in. All screened-in referrals were subsequently assessed by the CPS agency, and are the subject of the next section of this report, CPS initial assessment. **Appendix E** shows a breakdown of referrals and screening decisions by county for calendar year 2012. Appendix E also shows screening decisions made on non-CPS reports (service referrals) by county.

**Table 1** Statewide Referrals and Screening Decisions, 2012

	Number of Referrals	Screened- out Referrals	Percent Screened- out	Screened-in Referrals	Percent Screened-in
<b><i>State Total</i></b>	70,266	43,957	63%	26,309	37%

A CPS report is created for each child who is identified in a screened-in referral as an alleged victim of child maltreatment or threatened maltreatment. The number of screened-in referrals (26,309) is smaller than the number of CPS maltreatment reports (39,460) because one referral may include information about multiple children and each child in the referral is counted as a unique CPS report. For example, a referral from a community reporter may allege maltreatment against three children in a family. For purposes of this report, the CPS agency received one referral through the reporter's phone contact with the CPS county agency; however, three CPS reports were created as there were three children who each had one or more maltreatment allegations.

Table 2, below, shows the number of CPS maltreatment reports per 1,000 children in Wisconsin during calendar year 2012. Out of a population of 1,000 Wisconsin children, approximately 29.9 children were involved in a report of alleged maltreatment in 2012. **Appendix F** lists the total number of CPS reports and CPS reports per 1,000 children by county during 2012.

**Table 2** CPS Maltreatment Reports per 1,000 Children, 2012<sup>1,2</sup>

	Child Population (Ages 0-17)	Screened- in Referrals	Number of CPS Maltreatment Reports	CPS Reports per 1,000 Children <sup>1</sup>
<b><i>State Total</i></b>	1,317,557	26,309	39,460	29.9

<sup>1</sup> – There are 33,289 unique children included in these 39,460 CPS maltreatment reports. The estimation of CPS reports by child population is based on the total number of CPS reports.

<sup>2</sup> – **Population Source:** Office of Juvenile Justice 2012 Easy Access Population Profile  
[http://www.ojdp.gov/ojstatbb/ezapop/asp/comparison\\_selection.asp?selState=55](http://www.ojdp.gov/ojstatbb/ezapop/asp/comparison_selection.asp?selState=55)

Figure 1 displays the total number of CPS maltreatment reports received by CPS agencies from 2003 through 2012. The number of CPS maltreatment reports has fluctuated between approximately 38,000 and 42,500 reports over this time period. Overall there was a 2.5 percent decline in CPS maltreatment reports over the past 10 years. The CPS reporting rate has remained fairly constant over the last five years at approximately 30 out of 1,000 children in Wisconsin involved in a CPS report of alleged maltreatment in a given year.

**Figure 1** Total Number of CPS Maltreatment Reports Statewide, 2003-2012

### Child Protective Services - Initial Assessment

The primary purpose of the CPS initial assessment is to assure the child's safety and determine whether the child and family are in need of any services to help keep the child safe. The CPS initial assessment process does not result in establishing legal culpability – instead the case is referred to law enforcement and possibly the courts for that purpose. The CPS initial assessment must be conducted in accordance with the Child Protective Service Access and Initial Assessment Standards and these standards recognize that the CPS role must differ in cases of familial and non-familial maltreatment.

In cases of maltreatment involving primary caretakers, the CPS initial assessment includes an interview with and observation of the child, a visit to the family home, an interview with any siblings and an interview with the child's caregiver(s). Interviews may also be conducted with other persons that have contact with the child or family. Decisions that must be made during the CPS initial assessment include: whether the child is safe; whether maltreatment occurred; who the maltreater(s) was (if they can be identified), and whether the family is in need of services to assure the safety of the child. Many elements enter into the decision-making process including: the child's ability to function and communicate; parent/caregiver protective capacities; physical evidence; overall family functioning; and the absence or presence of stressful family circumstances.

Upon completion of a CPS initial assessment, the agency must determine whether child maltreatment has occurred. Initial assessment findings for allegations where maltreatment has occurred are either 'substantiated' or 'unsubstantiated'. Additionally, a third finding may be used: "not able to locate sources of information and/or subjects of the report – unsubstantiated". This finding is to be used only when the agency is unable to locate critical

family members or others involved in the report, making it impossible to gather the information needed to make a determination.

Substantiated cases refer only to cases in which CPS staff determine, based upon a preponderance of the evidence, that child maltreatment has occurred. A preponderance of evidence is a lower standard of evidence than that needed for proof in juvenile or criminal court procedures. The agency may also determine that maltreatment has occurred without identifying a particular person that has maltreated or will maltreat a child. Therefore, the agency has the authority to respond to children in need of protection or services even when a specific maltreater cannot be positively identified. In all cases, a substantiated maltreatment finding is not necessary for a family to be offered services.

Alternative response assessments do not result in a substantiation or unsubstantiation. Rather, these assessments result in findings of either 'services needed' or 'services not needed', depending on the result of the assessment. No data is presented on alternative response findings below because not all counties participate in these assessments, and there is not enough data to report.

During the CPS initial assessment, the CPS agency must also assess whether the child or children in the home are in danger of child maltreatment. If the child or children are unsafe, regardless of whether there is a substantiation decision, the CPS agency must create a safety plan to control identified threats to child safety. The safety decision and services offered to the family as a result of the CPS initial assessment are the focus of the section of this report entitled 'Services to Families'.

Table 3 shows the statewide CPS initial assessment workload for calendar year 2012. The number of CPS initial assessments (24,953) is less than the number of children listed in maltreatment reports (33,289) because one CPS initial assessment is completed per family. The number of CPS initial assessments (24,953) is less than the number of CPS maltreatment reports (39,460) in Table 2 because multiple maltreatment reports containing different maltreatment allegations for a child may be assessed during one CPS initial assessment. Also, there are more maltreatment allegations (44,228) than children listed in maltreatment reports (33,289) and CPS initial assessments (24,953) because maltreatment allegations are counted for each instance of maltreatment for an alleged victim. As children may have multiple allegations of maltreatment, and as one initial assessment may assess multiple allegations, these figures will always be less than the total number of maltreatment allegations.

**Table 3** CPS Initial Assessment Workload, 2012

<i>Number of CPS Initial Assessments</i>	24,953
<i>Related to →</i>	44,228 Maltreatment Allegations
<i>Involving →</i>	33,289 Children in Maltreatment Reports

**Appendix G** shows the number of CPS initial assessments completed by each county during 2012.

Table 4 shows the statewide maltreatment substantiation rate (13 percent) for calendar year 2012. The maltreatment substantiation rate is the proportion of maltreatment allegations that were found to be substantiated after the conclusion of the CPS initial assessment. The substantiation rate is calculated by dividing all substantiated maltreatment allegations for calendar year 2012 by the total number of CPS reports. **Appendix G** shows the substantiation rate by county for 2012.

**Table 4** Statewide Maltreatment Substantiation Rate, 2012

	Number of CPS Maltreatment Reports	Maltreatment Substantiation Count	Maltreatment Substantiation Rate
<b><i>State Total</i></b>	39,460	5,060	13%

Table 5 shows the child victimization rate for calendar year 2012. The child victimization rate is the number of unique children who were victims of substantiated maltreatment out of a population of 1,000 children. The child victimization rate is calculated by dividing the total number of unique children who were victims of substantiated maltreatment by Wisconsin's total child population. Please note that of these 4,537 child victims, 451 children were victims of two or more substantiated instances of maltreatment. Table 5 also represents a change in calculation from prior year's reports which were based on a duplicated child count. **Appendix H** shows the child victimization rate for 2012, by county.

**Table 5** Statewide Unique Child Victimization Rate, 2012<sup>1</sup>

	Child Population (Ages 0-17)	Number of Unique Child Victims	Child Victims per 1,000 Children
<b><i>State Total</i></b>	1,317,557	4,537	3.4

<sup>1</sup> – **Population Source:** Office of Juvenile Justice 2012 Easy Access Population Profile  
[http://www.ojjdp.gov/ojstatbb/ezapop/asp/comparison\\_selection.asp?selState=55](http://www.ojjdp.gov/ojstatbb/ezapop/asp/comparison_selection.asp?selState=55)

Figure 2 depicts the trend in substantiation rates in Wisconsin from 2003 through 2012. Here we see that the overall maltreatment substantiation rate appears to be relatively steady from 2003 to 2005, declines from 2006 through 2010, and is relatively steady from 2010 to 2012. The marked decline in the substantiation rate between calendar year 2005 and subsequent calendar year periods was likely driven by 2005 Wisconsin Act 232, made effective on October 1, 2006, which eliminated the requirement that CPS agencies complete a CPS initial assessment in situations where the alleged maltreater is not a caregiver for the children. While an initial assessment is no longer required in these situations, the instance may still be referred to law enforcement and the family may be offered services. Due to this law change, there was a significant decline in the number of non-caregiver CPS initial assessments in 2007. Non-caregivers, such as peers, family friends, or strangers, tend to comprise a significant proportion of sexual abuse cases. As these cases no longer went

through initial assessment, this affected the number of sexual abuse substantiations, which declined by 56 percent from 2006 to 2012.

**Figure 2** Statewide Maltreatment Substantiation Rates, 2003-2012

Figure 3 displays the child victimization rate in Wisconsin over a five year period. In prior reports children substantiated more than one time were counted multiple times in the victimization rates, but beginning with 2011 child victim counts were unduplicated. The decline in the victimization rate from 2006 to 2007 was impacted by a policy change in the new Access and Initial Assessment Standards released in September 2007, where the 'abuse likely to occur' allegation and finding was removed as a maltreatment finding. The full effect of this legislative change can be seen in the 2008 and 2009 data.

**Figure 3** Statewide Victimization Rates per 1,000 Children, 2008-2012

Table 6 examines maltreatment allegations by maltreatment type (neglect, physical abuse, sexual abuse and emotional abuse) and maltreatment finding for 2012. For specific allegations of maltreatment, the maltreatment finding may be substantiated, unsubstantiated, or not able to locate sources of information and/or subjects of the report – unsubstantiated. **Appendix I** shows a county-by county breakdown by maltreatment allegation type and finding.

**Table 6** Total Maltreatment Allegations by Type and Finding, 2012<sup>1</sup>

Maltreatment Type	Maltreatment Finding			Total
	S	U	N	
Neglect	2,773	18,577	559	21,909
Physical Abuse	975	10,631	190	11,796
Sexual Abuse	1,256	4,616	142	6,014
Emotional Abuse	56	815	14	885
<b>Total</b>	<b>5,060</b>	<b>34,639</b>	<b>905</b>	<b>40,604<sup>1</sup></b>

**S=Substantiated****U=Unsubstantiated****N= Not Able to Locate Information****Sources/Report Subjects - Unsubstantiated**

<sup>1</sup> - The total number of maltreatment findings presented above does not include the 3,624 maltreatment findings of services needed and services not needed associated with alternative response assessments.

Figure 4 shows the maltreatment findings from all CPS initial assessments by maltreatment type for calendar year 2012. The figure displays the maltreatment types with the most to least allegations from left to right. Thus, (1) neglect is the most alleged type of maltreatment, followed by (2) physical abuse, (3) sexual abuse, and (4) emotional abuse. The figure also shows the maltreatment type with the most substantiations as (1) neglect, followed by (2) sexual abuse, (3) physical abuse, and (4) emotional abuse.

**Figure 4** Maltreatment Findings by Maltreatment Type, 2012

Figure 5 shows percentages of substantiated maltreatment findings by type. More than half of substantiated allegations are neglect allegations. Sexual abuse and physical abuse make up 25 percent and 19 percent of substantiations respectively. Emotional abuse accounts for one percent of all substantiations.

**Figure 5** Maltreatment Substantiations by Maltreatment Type, 2012

Table 7 displays the percentage of maltreatment allegation substantiations by the type of maltreatment experienced. The figures behind these substantiation rates can be found in Table 6, which displays the total allegation and substantiation counts. To determine the substantiation rate by maltreatment type, the substantiation count for that type of maltreatment is divided by the total number of allegations for that maltreatment. For example, the physical abuse maltreatment substantiation percent was calculated by dividing the total number of substantiated physical abuse allegations (975) by the total number of physical abuse allegations (11,796). **Appendix J** shows the substantiation percent within maltreatment type by county for 2012.

**Table 7** Statewide Maltreatment Allegation Substantiation Rate by Maltreatment Type, 2012

	Neglect Substantiation Rate	Physical Abuse Substantiation Rate	Sexual Abuse Substantiation Rate	Emotional Abuse Substantiation Rate
<b>State Total</b>	13%	8%	21%	6%

The following figures (Figures 6-9) depict the maltreatment findings for each maltreatment type for 2008 through 2012. Overall, neglect allegations have decreased across this timespan, and neglect substantiations have decreased by nine percent in the past five years. Changes in Wisconsin's data entry system and the addition of alternative response as an initial assessment disposition have impacted usage of neglect allegations and substantiations. Please refer to **Appendix D** for further information regarding data interpretation.

The number of physical abuse allegations and substantiations have overall declined from 2008 to 2012, exhibiting an eight percent decline in allegations and a 17 percent decline in substantiations over this time period.

The number of sexual abuse allegations have declined 11 percent from 2008 – 2012. During this same timeframe, the number of sexual abuse substantiations has steadily declined for a total decrease of 21 percent.

Emotional abuse allegations have remained relatively stable from 2008 to 2012, but the number of substantiations over this time period have increased.

**Figure 6** Neglect Allegation Findings, 2008-2012

**Figure 7** Physical Abuse Allegation Findings, 2008-2012

**Figure 8** Sexual Abuse Allegation Findings, 2008-2012**Figure 9** Emotional Abuse Allegation Findings, 2008-2012

## Reporters

Reporters are persons who contact CPS agencies with information regarding alleged maltreatment of a child. This section reflects data on the reporters who made the reports received by CPS agencies (both screened-in and screened-out referrals) during calendar year 2012.

### Reporter's Relationship to Alleged Child Victim

Certain individuals whose employment brings them into contact with children are required by law to report any suspected child maltreatment seen in the course of their professional duties. These individuals are referred to as mandated reporters. However, anyone who suspects a child is being maltreated may make such a report. Persons making referrals in good faith are immune from criminal or civil liability. Wisconsin's CPS delivery system requires any concerned individual to report suspected child maltreatment directly to the local CPS agency or law enforcement. Please refer to **Appendix M** for a list of where to report in your area. Any referral of alleged child maltreatment received by law enforcement officials must subsequently be referred to the local CPS agency.

More information about reporting suspected child maltreatment is available at the following website: <http://www.dcf.wisconsin.gov/children/CPS/index.HTM>.

Table 8 displays the count of all screened-in and screened-out referrals by the type of reporter during calendar year 2012. The table lists the reporter types in descending order from the most frequent reporters to the least frequent reporters.

**Table 8** Referrals (Screened-in and Screened-out) by Reporter's Relationship to the Alleged Child Victim, 2012<sup>1</sup>

Reporter	Count of Referrals	Percent of Total Referrals
Educational Personnel	12,370	18%
Legal/Law Enforcement	11,165	16%
Social Service Worker	9,564	14%
Parent of Child Victim	7,693	11%
Anonymous/Not Documented	6,928	10%
Other	4,943	7%
Mental Health Professional	4,930	7%
Relative	4,616	7%
Medical Personnel	3,691	5%
Neighbor/Friend	2,524	4%
Child Care Provider	1,005	1%
Other Caregiver of Child Victim	565	1%
Child Victim	244	< 1%
Maltreater	28	< 1%
<b>State Total</b>	<b>70,266</b>	<b>100%</b>

<sup>1</sup> - For purposes of this report, all reporters have been condensed into categories.

Table 9 shows the types of maltreatment allegations that were screened-in for a CPS initial assessment by reporter type. The number of allegations (44,228) exceeds the total number of screened-in referrals (26,309) because reporters may have made more than one allegation of maltreatment per child in the screened-in CPS report. The reporters are listed in descending order, from the reporters who made the most maltreatment allegations to those who made the least maltreatment allegations.

**Table 9** Total Maltreatment Allegations (Screened-in Referrals Only) by Reporter's Relationship to the Alleged Child Victim, 2012<sup>1</sup>

Mandated Reporter	Reporter Category	Maltreatment Allegation Type				
		Neglect	Physical Abuse	Sexual Abuse	Emotional Abuse	State Total
Yes	Legal/Law Enforcement	4,733	1,878	1,333	157	8,101
Yes	Social Service Worker	3,530	1,897	957	97	6,481

	<b>State Total</b>	24,509	12,670	6,070	979	44,228

<sup>1</sup> – For purposes of this report, all mandated reporter professions have been condensed into categories.

Figure 10 shows total maltreatment allegations (screened-in referrals only) made by mandated versus non-mandated reporters by the maltreatment type alleged. As shown in Table 9, the 'mandated reporter' category includes legal/law enforcement personnel, social service workers, educational personnel, medical personnel, mental health workers, and child care providers (a full list of mandated reporters by professions is found in s. 48.981(2) Wis. Stats., or visit <http://www.dcf.wisconsin.gov/children/CPS/progserv/manrpts.HTM>). All other reporter categories are considered non-mandated.

Mandated reporters made more total allegations than non-mandated reporters and accounted for the majority of each type of allegation.

**Figure 10** Total Maltreatment Allegations by Maltreatment Type (Screened-in Referrals Only), Mandated versus Non-Mandated Reporters, 2012

### Reporter's Allegations and Subsequent Findings

This section examines screened-in maltreatment allegations reporters made during calendar year 2012 which were found through the CPS agency initial assessment to be substantiated instances of child maltreatment.

Figure 11 compares the percentage of substantiated maltreatment allegations by type as compared to total maltreatment allegations reported by mandated and non-mandated reporters. The total number of maltreatment allegations by type can be seen in Table 6.

Across all categories of maltreatment, mandated reporters were found to have a higher percentage of allegation substantiations after CPS initial assessment than non-mandated reporters' maltreatment allegations. This higher percentage of substantiation is likely due to the fact that mandated reporters are in general more educated on child maltreatment reporting protocol, and so they are less likely to report situations that do not meet the definition of child maltreatment than non-mandated reporters.

**Figure 11** Percentage of Substantiated Maltreatment Allegations by Type, Reported by Mandated and Non-Mandated Reporters, 2012

## Victims

A child is considered a maltreatment victim when the CPS agency identifies that at least one maltreatment allegation was found to be substantiated upon completion of the CPS initial assessment. Therefore, if a child is a victim of substantiated neglect and physical abuse in the same CPS initial assessment, he/she is counted as a victim once. If the same child was involved in two or more CPS initial assessments (for example, one in January and one in October), in which he/she had at least one substantiated maltreatment allegation, the child is counted only once for the state rate but may factor into the abuse victimization rates of multiple counties. Based on this method, there were 4,537 victims of substantiated maltreatment in 2012.

## Characteristics of Maltreated Children

### *Gender*

Figure 12 displays calendar year 2012 victims by gender. In 2012, more females were the victims of child maltreatment than were males, likely due to the fact that they suffer higher rates of sexual abuse than males.

**Figure 12** Gender of Unique Child Maltreatment Victims, 2012

Table 10 displays the child victimization rate by gender for calendar year 2012. The victimization rate by gender is calculated by dividing the number of unique female victims in 2012 by the Wisconsin female child population (ages 0-17), and by dividing the number of unique male victims in 2012 by the Wisconsin child male population (ages 0-17). In 2012, females comprised a disproportionate share of the victims given their number in the Wisconsin child population.

**Table 10** Child Victimization Rate by Gender, 2012<sup>1, 2</sup>

Gender	Child Population (Ages 0-17)	Count of Victims	Child Victims Per 1,000 Children
Females	643,483	2,483	3.9
Males	674,074	2,020	3.0
<i>Total</i>	1,317,557	4,537	3.4

<sup>1</sup> – Thirty-four victims are missing from the gender counts because their gender was not reported.

<sup>2</sup> – **Population Source:** Office of Juvenile Justice 2012 Easy Access Population Profile  
[http://www.ojdp.gov/ojstatbb/ezapop/asp/comparison\\_selection.asp?selState=55](http://www.ojdp.gov/ojstatbb/ezapop/asp/comparison_selection.asp?selState=55)

### Age

Figure 13 displays the count of victims by age range for calendar year 2012. In 2012, the <1-3 age group accounted for the largest number of victims and 55 percent of victims were under the age of 8. These proportions have been stable over time.

**Figure 13** Age Range of Unique Child Maltreatment Victims, 2012<sup>1</sup>

<sup>1</sup> – Twenty-six child maltreatment victims are excluded from this chart due to unreported age, and makeup less than one percent of the total child maltreatment victims.

Figure 14 displays the child maltreatment victimization rate by age and gender for calendar year 2012. This victimization rate is calculated by dividing the number of 2012 unique child victims of each gender and age group by the respective number of children in the state's population of the same gender and age group. In the younger age groups, males and females are victimized at similar rates. However, while the male victimization rate falls as boys age, the female victimization rate remains relatively steady.

**Figure 14** Child Maltreatment Victimization Rate by Age and Gender, 2012<sup>1</sup>

<sup>1</sup> – **Population Source:** Office of Juvenile Justice 2012 Easy Access Population Profile  
[http://www.ojjdp.gov/ojstatbb/ezapop/asp/comparison\\_selection.asp?selState=55](http://www.ojjdp.gov/ojstatbb/ezapop/asp/comparison_selection.asp?selState=55)

To understand why female victimization rates remain relatively stable across age ranges while the male victimization rates fall, please refer to Figure 15 and 16 below. Figure 15 displays the number of substantiated maltreatment allegations, by victim age range, for female victims. Figure 16 provides the same information for male victims. The 2,483 female victims experienced 2,749 maltreatment substantiations, while the 2,020 male victims experienced 2,255 maltreatment substantiations. In comparing Figure 15 and 16, a greater rate of female victimization among the two older age ranges is seen and is due to females experiencing significantly greater instances of substantiated sexual abuse than their male counterparts. This is especially true within the 12-15 age range where females have 6.6 times the substantiation rate as males of their same age. A comparison of these figures also shows that males are on average physically abused at greater rates than females, and are abused at twice the level of females in the 4-7 age range. Neglect declines with age for both males and females.

**Figure 15** Substantiated Maltreatment Allegations, by Age, for Female Victims, 2012<sup>1</sup>

<sup>1</sup> – Figure 15 and 16 do not include the 56 maltreatment substantiations with an undocumented gender and/or age value.

**Figure 16** Substantiated Maltreatment Allegations, by Age, for Male Victims, 2012<sup>1</sup>

<sup>1</sup> – Figure 15 and 16 do not include the 56 maltreatment substantiations with an undocumented gender and/or age value.

### *Race and Ethnicity*

Figure 17 displays the count and percentage of victims by race for calendar year 2012, as compared to the race of the total Wisconsin child population. African American children and American Indian children are victims of child maltreatment at higher proportions than their comparative share of the general Wisconsin child population.

**Figure 17** Victim and Wisconsin Child Population by Race Comparison, 2012<sup>1, 2</sup>

<sup>1</sup> – **Population Source:** Easy Access to Juvenile Populations,  
[http://www.ojjdp.gov/ojstatbb/ezapop/asp/comparison\\_selection.asp?selState=55](http://www.ojjdp.gov/ojstatbb/ezapop/asp/comparison_selection.asp?selState=55)

<sup>2</sup> – 441 victims (10 percent) are not depicted above because their race was unknown or not documented. Native Hawaiian/Pacific Islander (7 victims) is not depicted.

Of the 4,537 unique child maltreatment victims, 3,028 victims (67 percent) were identified as not Hispanic/Latino, 416 victims (9 percent) were identified as Hispanic/Latino, and for 1,093 victims (24 percent) the ethnicity was unknown or not documented. People of Hispanic ethnicity may be of any race.

## Fatalities

The death of a child is one of the most tragic consequences of child maltreatment. The role of Child Protective Services in the case of a child maltreatment death is to assure the safety of any other children present in the family and to assess the family's need for services. Investigations of child deaths are generally handled by law enforcement agencies. For purposes of this report, the only child fatalities included are child deaths that were associated with a substantiated allegation of maltreatment. County CPS agencies and the Bureau of Milwaukee Child Welfare reported 23 substantiated cases of a child having died from maltreatment in calendar year 2012. Figure 18 shows the count of child fatalities substantiated due to maltreatment from 2003-2012.

**Figure 18** Count of Child Fatalities Substantiated as Maltreatment, 2003-2012

Figure 19 shows the five year trend of child fatalities which were open with the CPS agency at the time of death, and compares this number with the number of children who were receiving CPS services at the time of their death. As seen here, two children were in open cases for child welfare services with the county CPS agency or the Bureau of Milwaukee Child Welfare at the time of their death.

**Figure 19** Child Fatalities and Open Case Child Fatalities Comparison, 2008-2012

A review of the cases reported by CPS agencies of a child having died from maltreatment during the past five years (2008-2012) highlights trends among child maltreatment fatalities in Wisconsin. First, the majority of children who are victims of maltreatment which result in death are babies or very young children. Of the reported child maltreatment fatalities from 2008-2012, 61 percent of the deaths were children age three or under and 35 percent of the deaths were children under age one.

The majority of maltreaters substantiated for the child's death in 2012 were the biological parent or the parent's partner (88 percent). For the child maltreatment fatalities reported by CPS agencies in 2012, the most frequent maltreater was the biological mother (57 percent), biological father (48 percent), and partner of parent/family friend (22 percent). In cases where the biological mother was substantiated for the child's death, the maltreatment type was predominantly neglect of the child. In cases where the biological father was substantiated for the child's death, the majority of the time the maltreatment type was physical abuse. Both the average and median age of the known substantiated maltreaters in 2012 was 28 years.

Table 11 provides a summary of child maltreatment fatalities, maltreater information and maltreatment type by county. Of the 23 child maltreatment fatalities in 2012, three were attributable to abusive head trauma or were impacted babies, which are further described on pg. 35. The maltreater who abused the child causing death by abusive head trauma or as an impacted baby is indicated with a double asterisk in the maltreater 'relationship to child' column. The children who had a family with an open child welfare case with a county CPS agency or the Bureau of Milwaukee Child Welfare at the time of the child's death is indicated by a single asterisk in the 'county' column.

**Table 11** Profile of Child Fatalities due to Substantiated Abuse, 2012

County	Maltreatment Type	Child Victim			Maltreater

F = Female, M = Male, American Indian = American Indian/Alaskan Native, U = Unknown.

\*Family was open for child welfare services with the county CPS agency or the Bureau of Milwaukee Child Welfare at the time of the child's death.

\*\*Maltreater substantiated for committing the abuse that led to child's death by abusive head trauma or as an impacted baby.

## **Abusive Head Trauma and Impacted Babies**

2005 Wisconsin Act 165 amended state statutes by creating provisions for the training of individuals who care for or supervise children under age 5 on shaken baby syndrome and impacted babies. Shaken Baby Syndrome is defined as, “a severe form of brain injury that occurs when an infant or young child is shaken forcibly enough to cause the brain to rebound against his or her skull.” [Ref. s. 253.15(1)(f), Stats.] Impacted Baby is defined as, “an infant or young child who suffers death or great bodily harm as a result of being thrown against a surface, hard or soft.” [Ref. s. 253.15(1)(d), Wis. Stats.] The term ‘Abusive Head Trauma’ encapsulates all descriptions of shaken baby syndrome, cranial cerebral trauma or injury, subdural hemorrhage/hematoma, retinal hemorrhage, traumatic brain injury, and blunt force head trauma.

In 2012, there were 112 maltreatment allegations where one of the abusive head trauma and impacted baby related diagnoses was used to describe the maltreatment allegation for children ages 0-4 years. Please note that a direct comparison with 2011 figures are not possible as the 2011 figures are for children ages 0-5 years. Of the 112 allegations made in 2012, 46 (41 percent), were found to be substantiated upon completion of the CPS initial assessment, representing the same number of child victims. Of these substantiated victims, 25 (54 percent) were male and 19 (41 percent) were female (two victims had no recorded gender). Eighty percent of the substantiated victims (37) were age one or under. The maltreater was the child’s biological parent in 41 percent of the cases.

## Maltreaters

A person is considered a maltreater when the CPS agency, after completing the CPS initial assessment, identifies the person as having committed one or more types of child maltreatment. A person is counted as a maltreater once per CPS initial assessment no matter how many substantiated maltreatment types he/she has committed. Likewise, a maltreater is counted only once if he/she is involved in two or more separate CPS initial assessments in which he/she had at least one substantiated maltreatment finding during the calendar year (for example, one in January and one in October). Please note that in previous years, maltreaters were counted multiple times if they had two or more separate CPS initial assessments, and therefore the number of unique maltreaters will not be directly comparable to last year's figures.

Based on this method, in calendar year 2012 there were 3,544 unique maltreaters of substantiated child maltreatment. There are fewer unique maltreaters than unique victims (4,537) and unique instances of substantiated abuse (5,060) because some maltreaters were found to have maltreated more than one child, and/or to have committed multiple instances of abuse.

The CPS agency may also designate that a maltreatment type is substantiated for a child without identifying the maltreater, for example if the maltreater is unknown. Of the 3,544 unique maltreaters, 93 (three percent) were identified as an unknown maltreater.

CPS agencies do not routinely complete a CPS initial assessment in situations where the alleged maltreater is not a caregiver for the children. As these matters are referred to law enforcement, the characteristics of non-caregivers who maltreat children are not represented in this report.

## Characteristics of Maltreaters

### *Gender*

Figure 20 displays the frequency and proportion of maltreaters by their gender.

**Figure 20** Gender of Unique Maltreaters, 2012

## Age

Figure 21 shows the count of maltreaters by their age range for calendar year 2012. Age data was unknown for 341 maltreaters (ten percent). As the majority of maltreaters are parents, the most common child-rearing age groups account for the largest number of maltreaters.

**Figure 21** Age Range of Unique Maltreaters, 2012

## Race/Ethnicity

Figure 22 displays the count of maltreaters by race for calendar year 2012, and Figure 23 displays Wisconsin's adult population by race for comparison. Persons who identified as African American and American Indian comprise a larger share of identified maltreaters than their proportional share of Wisconsin's general adult population.

**Figure 22** Race of Unique Maltreaters, 2012<sup>1, 3</sup>

**Figure 23** Race of WI Population Over 18, 2012<sup>2, 3</sup>

<sup>1</sup> – The six Native Hawaiian/Other Pacific Islander maltreaters are not depicted in this chart.

<sup>2</sup> – Native Hawaiian/Other Pacific Islanders are not depicted.

<sup>3</sup> – **Population Source:** Office of Juvenile Justice 2012 Easy Access Population Profile.  
[http://www.ojjdp.gov/ojstatbb/ezapop/asp/comparison\\_selection.asp?selState=55](http://www.ojjdp.gov/ojstatbb/ezapop/asp/comparison_selection.asp?selState=55)

Of the 3,544 unique maltreaters, 1,891 (53 percent) were identified as not Hispanic/Latino, 218 (6 percent) were identified as Hispanic/Latino, and 1,435 (41 percent) maltreaters had an unknown or not documented ethnicity. People of Hispanic ethnicity may be of any race.

### *Substantiated Allegations*

The 3,544 unique maltreaters were involved in 5,676 unique maltreatment allegations. Figure 24 depicts the 5,676 maltreatment allegation findings by maltreater gender during calendar year 2012. If a maltreater had more than one substantiated allegation finding during the year he/she will be depicted more than once in this graph. Males are sexual perpetrators at significantly greater rates than females. The majority of female perpetrators' maltreatment was related to neglect.

**Figure 24** Substantiated Maltreatment Allegations by Abuse Type and Maltreaters' Gender, 2012<sup>1</sup>

<sup>1</sup> — Of the 73 total substantiated allegations of emotional abuse, males accounted for 40 maltreaters, females accounted for 31 maltreaters, and two maltreaters have an unknown gender.

## Relationship to Victim

This section outlines the relationship of maltreaters to the child victims they were found to have maltreated. Table 12 shows all substantiated maltreatment allegations by maltreatment type and the person designated as the maltreater. The first category, primary caregivers, is comprised of maltreaters who live in the home, regularly or intermittently, with the child victim. In 2012, primary adult caregivers in the home (i.e. parents, step-parents, partners of parents, and foster parents) were the maltreaters in 83 percent of the substantiated maltreatment allegations. The second category, secondary caregivers, is comprised of adults who have temporary caregiving responsibility for the child victim but do not live in the child's home. The third category, non-caregivers, is individuals who interact with the child but do not have caregiving responsibility. The last category depicts those allegations where the maltreater is unknown/not verified. CPS agencies may have a preponderance of evidence that a child was maltreated but not enough information to verify that a specific maltreater committed the abuse.

**Table 12** Substantiated Allegations by Maltreater Relationship to Child Victim, 2012

	NEGLECT	PHYSICAL	SEXUAL	EMOTIONAL	TOTAL	PERCENTAGE
<b>PRIMARY CAREGIVERS</b>						
Parent	2,876	580	131	55	3,642	64%

	27	137	82	1	247	4%
<b>State Total</b>	<b>3,293</b>	<b>1,025</b>	<b>1,285</b>	<b>73</b>	<b>5,676</b>	<b>100%</b>

Figure 25 shows the percentage of substantiated maltreatment allegations, by maltreatment type and by the three maltreater categories (primary, secondary, and non-caregiver). For the 4,716 substantiated maltreatment allegations by primary caregivers, the largest share of their total substantiated maltreatment allegations is neglect at 68 percent. However, the 314 secondary caregivers and 247 non-caregivers had sexual abuse as the largest share of their total substantiated maltreatment allegations at 73 percent and 89 percent, respectively.

**Figure 25** Percentage of Maltreatment Substantiations, by Maltreatment Type, and by Maltreater Category, 2012

## Services to Families

The role of CPS differs in cases of familial and non-familial maltreatment, and therefore the services the CPS agency offers a family likewise differs. In all cases, a substantiated maltreatment finding is not required for a family to be offered services. In cases of maltreatment involving primary caregivers, the decision to provide services to the family is based on the safety assessment and analysis and resulting safety decision. The safety decision is the CPS agency's determination, based on the information gathered during the CPS initial assessment, as to whether the conditions present make the child/children unsafe in the family home. A designation of safe or unsafe is required for all children who reside within the household. If at least one child is designated as unsafe, then the initial assessment safety decision finding for the home is unsafe. In calendar year 2012, primary caregiver CPS initial assessments comprised 92 percent of the 24,953 CPS initial assessments completed by agencies that year.

The role of CPS in cases of maltreatment by secondary and non-caregivers is to collaborate with and support the primary caregivers in providing protection and services for the child, when necessary. A safety assessment and analysis is not required in secondary CPS initial assessments and non-caregiver investigations because the child's safety within the home is not the focus of the case. CPS agencies completed 1,878 secondary CPS initial assessments and non-caregiver investigations (8 percent of all assessments) during calendar year 2012.

### Safety Decisions and Services

Figure 26 shows the safety decisions for completed safety assessments in primary caregiver CPS initial assessments. In calendar year 2012, the majority (89 percent) of primary caregiver CPS initial assessments resulted in a decision that one or more children in the initial assessment were safe. There were 2,559 primary caregiver CPS initial assessments (11 percent) which resulted in a decision that children were unsafe. Another 104 primary caregiver initial assessments were not labeled as safe or unsafe. **Appendix L** shows safety assessment results in primary caregiver CPS initial assessments by county.

If a child is determined to be safe, the CPS agency is not required to offer or refer the family for services. The CPS agency may still inform the family about voluntary services or available community resources to help meet family needs or support family functioning.

**Figure 26** Safety Assessment Results in Primary Caregiver CPS Initial Assessments, 2012

If a child is determined to be unsafe, the CPS agency is required to implement a safety plan to assure the child is safe and protected. The CPS Safety Intervention Standards provide CPS workers with a structured analysis and decision-making framework used to assess what specific, observable factors are making the child unsafe. These factors are known as safety threats. The identified safety threats and the analysis of these safety threats form the basis for safety planning. Safety planning ensures that safety threats are controlled to keep the child safe while the CPS agency works with the family to develop a plan to change those conditions or behaviors negatively affecting child safety. The goal is to eliminate safety threats in the family or to ensure the family has the resources necessary to control safety threats on their own.

While there are several distinct safety threats that can be identified as part of a CPS initial assessment process, for analytical purposes these threats may be grouped into four categories based on the nature of the concern. First, there are safety threats that relate to the act of maltreatment itself and the surrounding circumstances, such as premeditation, lack of remorse by the maltreater, or a hazardous living environment. Second, there are situations where the maltreatment has caused serious effects to the child such as emotional problems, lack of behavior control, and/or severe physical injury. Third, there are safety threats caused by deficiencies in adult functioning such as out-of-control behavior and/or violent tendencies. Finally, there are safety threats characterized by issues involving discipline and parenting practices such as blaming the child for the adult's problems, a lack of knowledge, resources, and/or motivation necessary to provide basic care for child, and/or ability to provide necessary supervision of a child.

In the 2,559 primary caregiver CPS initial assessments which resulted in a decision that children were unsafe, 7,431 safety threats involving 4,004 children were identified. There are more safety threats than CPS initial assessments as each initial assessment can identify multiple safety threats. Of the 2,559 unsafe primary caregiver CPS initial assessments, 54 percent of CPS initial assessments had one safety threat identified, 30 percent had two identified, 11 percent had three identified, four percent had four or more identified, and less than one percent had five or more safety threats identified. Figure 27 shows the frequency of identified safety threats by the groupings described above.

**Figure 27** Frequencies of Safety Threats by Category, 2012

Safety-related services are provided in the family home whenever possible to maintain and support the family unit. Services provided to ensure child safety are intended to immediately control any conditions or behaviors that place a child in danger. Some of these safety-related services may include parenting assistance, supervision/observation, child care/respite, mental and physical health services, and/or resources to help meet basic needs. In addition to services offered as part of the safety plan, the family may also be offered additional services to meet family needs and/or support family functioning. The use of in-home safety services for families reduces the need for more intrusive interventions such as removal of the child from the family home and may be used in response to children and families involved in both substantiated and unsubstantiated cases.

### **CPS Removals of Children to an Out-of-Home Placement**

If the conditions in the home pose immediate danger to a child and in-home services are insufficient to assure the safety of the child, the child may be removed from the family home and placed temporarily in out-of-home care. A substantiated maltreatment finding is not required or necessary for a child to be placed in out-of-home care when the child is unsafe. An out-of-home placement may be with a relative(s), a foster parent(s), a group home or shelter, or a residential child-caring facility.

During 2012, 2,578 unique children were placed in out-of-home care during the course of a CPS initial assessment. As some children were placed into out-of-home care multiple times in 2012, there were 2,791 instances of children being removed from their home and placed into out-of-home care. Figure 28 shows the decrease in children removed to out-of-home care as a result of the safety assessment. Please note that the figures presented in the 2011 CAN Report were calculated in error, and therefore will differ from the presentation below.

**Figure 28** Unique Child Removals to Out-of-Home Care during Initial Assessment, 2008-2012

Children who were placed in an out-of-home placement as a result of unborn child abuse are not included in the figures above and are presented separately in **Appendix B**.

Table 13 displays the count and average age of children removed as a result of a CPS initial assessment in 2012 by their gender. Of the 2,578 children removed from their family home and placed in out-of-home care in order to address safety threats identified during the CPS initial assessment, 48 percent were female and 52 percent were male.

**Table 13** Count and Average Age of Unique Male and Female Children Removed to Out-of-Home Care during Initial Assessment, 2012

Gender	Count of Children Removed	Average Age
Female	1227 (48%)	6.7
Male	1351 (52%)	5.7
<i>Total</i>	2,578	6.2

Figure 29 displays the primary race of the unique children who were removed to out-of-home care during a CPS initial assessment. Of these children removed to out-of-home care, 297, or 12 percent, were identified as Latino/Hispanic, and 2,069 children, or 80 percent, were identified as not Latino/Hispanic. A total of 212 of these children, or eight percent, had an undocumented or unknown ethnicity.

**Figure 29** Race of Unique Children Removed to Out-of-Home Care during Initial Assessment, 2012

**NOTE:** 3 Native Hawaiian/Other Pacific Islander children are not depicted.

## Initial Assessment Disposition

The initial assessment disposition is the action the CPS agency took upon completion of the CPS initial assessment, and Figure 30, below, shows the count and percentage of initial assessment dispositions in the 23,075 primary caregiver CPS initial assessments for calendar year 2012. As seen here, in some cases the case is closed as continued CPS intervention is not needed. Other closed cases are referred to appropriate community resources. Cases that are opened may be referred to services that are not under the purview of the CPS agency, as seen in those labeled as 'case opened – non-CPS services'. In other cases, the case is opened and the family is provided services through the CPS agency as seen in those labeled as 'case opened – ongoing CPS services: 'petition' and 'voluntary''. Finally, in some cases the family already had a CPS case open and services will continue for this family after this CPS initial assessment as seen in those labeled 'case already open – ongoing services'.

**Figure 30** Initial Assessment Dispositions in Primary Caregiver CPS Initial Assessments, 2012<sup>1</sup>

<sup>1</sup> – Figure 30 and 31 do not include the one unspecified Initial Assessment Disposition value.

Figure 31 shows 1,877 secondary CPS initial assessments and non-caregiver investigations by initial assessment disposition.

**Figure 31** Initial Assessment Dispositions in Secondary CPS Initial Assessments and Non-Caregiver Investigations, 2012<sup>1</sup>

<sup>1</sup> – Figure 30 and 31 do not include the one unspecified Initial Assessment Disposition value.

Table 14 shows the frequency and percentage of initial assessment dispositions according to the safety decision for primary caregiver CPS initial assessments. In the majority (91 percent) of cases where the safety decision is safe, the case was closed. Conversely, in the majority (94 percent) of cases where the safety decision was unsafe, the case was either opened for some type of services or was already opened for ongoing CPS services. A safety assessment and analysis is not required in secondary CPS initial assessments and non-caregiver investigations because the child's safety within the family home is not the focus of the case.

**Table 14** Safety Decision by Initial Assessment Disposition for Primary Caregiver CPS Initial Assessments, 2012<sup>1</sup>

Initial Assessment Disposition	SAFE		UNSAFE		TOTAL	
	Count	%	Count	%	Count	%
Case Closed	13,723	67%	100	4%	13,914	60%
Case Closed - Ref to Community Services	4,924	24%	46	2%	4,976	22%
Case Opened - Ongoing CPS Services: Voluntary	465	2%	689	27%	1,155	5%
Case Opened - Ongoing CPS Services: Petition	522	3%	1,454	57%	1,981	9%
Case Opened - Non-CPS Services	263	1%	14	1%	278	1%
Case Already Opened - Ongoing CPS Services	515	3%	256	10%	771	3%
<b>TOTAL</b>	<b>20,412</b>	<b>100%</b>	<b>2,559</b>	<b>100%</b>	<b>23,075</b>	<b>100%</b>

<sup>1</sup> — The 104 primary assessments without a safety decision are not depicted in the safe nor the unsafe columns, but are included in the total.

## Federal Performance Standards

Given the important role CPS agencies have in ensuring child safety, the federal government has placed greater emphasis on the CPS initial assessment function. As part of the Child and Family Services Review process, the federal Department of Health and Human Services (DHHS) has established casework performance indicators related to child safety and national performance standards. Casework performance indicators are assessed through case reviews and monitored by states as part of their quality improvement efforts. These indicators include timeliness for initiating CPS initial assessments and agency response to identifying, understanding and responding to child safety threats.

For the second round of state reviews, the federal DHHS has modified the national performance standard definitions. The new definitions are presented below. Wisconsin participated in a second round of the federal Child and Family Services Review (CFSR) process in 2010.

The national performance standards measure state performance on the absence of incidents of repeat maltreatment (Absence of Maltreatment Recurrence Rate) and the absence of maltreatment of children in out-of-home care (Absence of Maltreatment in Out-of-Home Care Rate). The Absence of Maltreatment Recurrence Rate is calculated by identifying all children who were victims of maltreatment in the first 6 months of a year and determining the percentage of children who were not victims of another substantiated report within a 6-month period after the initial substantiated report.

The Absence of Maltreatment in Out-of-Home Care Rate is calculated by identifying all the children who were not victims of substantiated maltreatment by a court-ordered relative provider, foster parent provider, or group home or residential facility provider during a given period. This number is then divided by the cumulative number of children who were in placement during the same period to establish the maltreatment in out-of-home care rate.

The national performance standards for both of these measures are set at the 75th percentile of all states based on the available data provided by states. For the first round of the federal CFSR, the national standard for absence of maltreatment recurrence was 93.9 percent or more. This standard was raised to 94.6 percent for the second round of the federal CFSR. Wisconsin met this standard in calendar year 2012. The first round national standard for absence of maltreatment in out-of-home care was 99.43 percent or more. This standard was raised to 99.68 percent for the second round, beginning in calendar year 2010. Wisconsin met this standard in calendar year 2012.

**Table 15** Federal Performance Measures, 2008 - 2012

<b>Safety Performance Measures</b>	<b>National Standard 2<sup>nd</sup> Round</b>	<b>Wisconsin Performance</b>				
		<b>CY 2008</b>	<b>CY 2009</b>	<b>CY 2010</b>	<b>CY 2011</b>	<b>CY 2012</b>
<b><u>Absence of Maltreatment Recurrence</u></b> Of all children who were victims of a substantiated maltreatment report, what percent were NOT victims of another substantiated report within a 6-month period?	<b>94.6% or more</b>	94.14%	94.84%	94.68%	94.87%	95.04%
<b><u>Absence of Maltreatment in Out-of-Home Care</u></b> Of all children in out-of-home care, what percent were NOT victims of maltreatment by foster parents, including court-ordered relative providers or facility staff members?**	<b>99.68% or more</b>	99.65%	99.61%	99.64%	99.72%	99.85%

Program Operations Section  
Division of Safety and Permanence  
Wisconsin Department of Children and Families

## APPENDIX A

**Child Maltreatment Related Statutes**

The following are excerpts from the Wisconsin statutes that create the basis for persons to report suspected child maltreatment and for child protective services agencies to respond. The excerpts are from the 2011-2012 Wisconsin Statutes. Included in the excerpts are sections from Chapter 48, known as the Children's Code, and sections from criminal statutes that are cross-referenced in the Children's Code.

- **s. 48.01, Wis. Stats., Title and legislative purpose.**
- **s. 48.02, Wis. Stats., Definitions.** This includes definitions of child maltreatment.
- **s. 48.13, Wis. Stats., Jurisdiction over children alleged to be in need of protection or services.** This describes the basis on which the local child protective services agencies (county social/human services departments and the Bureau of Milwaukee Child Welfare) may petition the court to intervene with a family.
- **s. 48.981, Wis. Stats., Abused or neglected children and abused unborn children.** This section describes the reporting requirements of alleged child maltreatment and describes the child protective services agencies' duties and responsibilities.
- **s. 939.22, Wis. Stats., Words and phrases defined.** This section defines terms that are used in describing certain crimes, some of which are cross-referenced in s. 48.02, Wis. Stats., in order to define child maltreatment.
- **s. 940.225, Wis. Stats., Sexual assault.** This defines the crime of sexual assault and is cross-referenced under s. 48.02(1)(b), Wis. Stats.
- **s. 944.30, Wis. Stats., Prostitution.** This defines the crime of prostitution and is cross-referenced under s. 48.02(1)(d), Wis. Stats.
- **s. 948.02, Wis. Stats., Sexual assault of a child.** This is the first in a series of crimes from chapter 948, known as Crimes Against Children that are cross-referenced under s. 48.02(1)(b), Wis. Stats., in order to define child sexual abuse. The following sections are also cross-referenced under s. 48.02(1), Wis. Stats.:
  - **s. 948.025, Wis. Stats., Engaging in repeated acts of sexual assault of the same child.**
  - **s. 948.05, Wis. Stats., Sexual exploitation of a child.**
  - **s. 948.055, Wis. Stats., Causing a child to view or listen to sexual activity.**
  - **s. 948.085, Wis. Stats., Sexual assault of a child placed in substitute care.**
  - **s. 948.10, Wis. Stats., Exposing genitals or pubic area.**

The complete Wisconsin statutes can be viewed at the Wisconsin State Legislature website: <http://www.legis.state.wi.us/rsb/stats.html>.

## APPENDIX B

**Unborn Child Abuse**

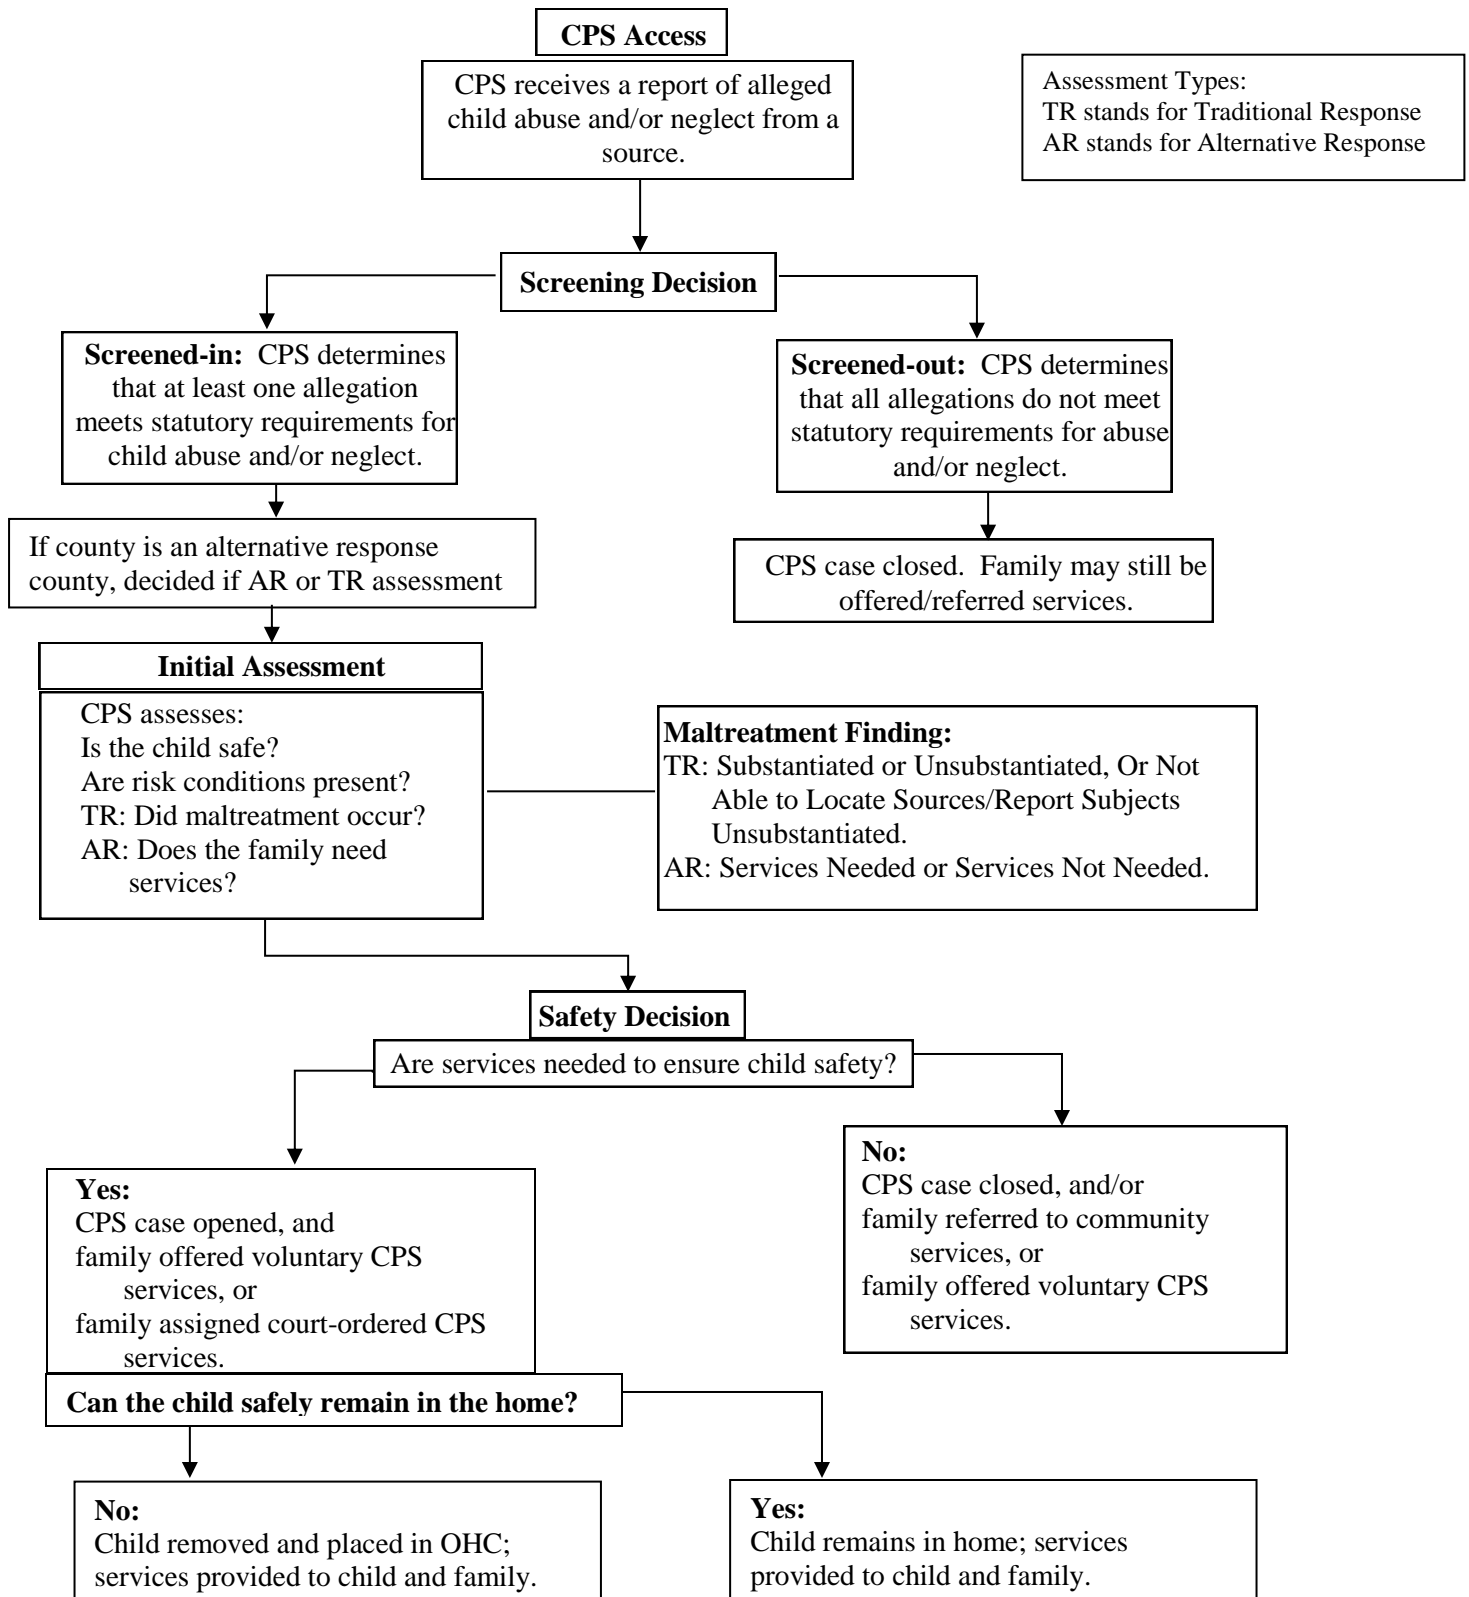

Unborn child abuse is defined as, “serious physical harm inflicted on the unborn child, and the risk of serious physical harm to the child when born, caused by the habitual lack of self-control of the expectant mother of the unborn child in the use of alcohol beverages, controlled substances or controlled substance analogs, exhibited to a severe degree.” [Ref. s. 48.02(1)(am), Wis. Stats.]

The maltreatment allegation of unborn child abuse is excluded from maltreatment allegation counts in the body of this report and presented here separately.

- In calendar year 2012, CPS agencies screened-in 302 allegations of unborn child abuse for further assessment.
- The most common reporters of screened-in unborn child abuse allegations were social service workers (23 percent), medical professionals (15 percent), legal/law enforcement (12 percent).
- Thirty-four of the 302 screened-in allegations (11 percent) of unborn child abuse were substantiated after the CPS initial assessment.
- Ten children were placed in out-of-home care after the child’s birth as a part of the CPS initial assessment of unborn child abuse.

## APPENDIX C

## An Overview of the CPS Process

## APPENDIX D

### Data Collection and Interpretation

#### Data Collection Process

The child maltreatment data collected for calendar year 2012 is from the electronic Wisconsin Statewide Automated Child Welfare Information System (eWiSACWIS). eWiSACWIS allows case workers, supervisors and administrators to manage child welfare services and supports practice responsibilities related to CPS Access, initial assessment, case management, court process, out-of-home placements, and more. Compared with the previous child maltreatment data source, the CFS-40 form, use of the eWiSACWIS system greatly expands the type of data collected and also improves the timeliness and accuracy of child welfare data. The quality of the data in this report is dependent upon the accuracy and timeliness of data recorded by the local agencies.

The historical data in this report (prior to 2005) includes data from both eWiSACWIS and the CFS-40 forms. Previously, counties completed CFS-40 forms at the conclusion of CPS initial assessments and data from this form was manually entered into a child maltreatment database. CPS agencies began using eWiSACWIS in 2001 and statewide rollout of the system was completed in 2004. The implications of using the more robust eWiSACWIS data and the transition from CFS-40 data to eWiSACWIS data are discussed in the next section.

#### Data Interpretation

As with previous publications, data for the 2012 edition of the Wisconsin Child Abuse and Neglect Report includes some cases in which the alleged maltreatment occurred in a previous year but was reported and assessed in 2012.

The 2012 Wisconsin Child Abuse and Neglect Report is the seventh year in which data was taken entirely from the eWiSACWIS system. As counties have increased experience using the eWiSACWIS system, the 2012 data has become more stable and reliable. In graphs which depict historical trends, differences in counts between calendar years 2004 and 2005 can be seen. These differences coincide with the transition from the legacy CFS-40 data system to eWiSACWIS and may be attributable to varied data entry practices between and functions of the two systems. In 2005 and 2006, the eWiSACWIS system required entry of a new allegation for every maltreater alleged for each child. Therefore, if neglect was alleged for one child by both parents it counted as 2 neglect allegations. The legacy CFS-40 data system counted allegations once per maltreatment type per child (regardless of the number of maltreaters).

In September 2007, the eWiSACWIS system was modified to allow allegations to be counted once per maltreatment type per child while also separately maintaining data on maltreaters. The impact of these data entry practices are most readily seen in the neglect maltreatment type as these situations more often involve maltreatment by multiple individuals.

Changes in child welfare policy and practice have also impacted the use of the 'abuse likely to occur' finding in calendar year 2007. At the beginning of calendar year 2007, the BMCW discontinued use of the 'abuse likely to occur' allegation type. Then, with the release of the new statewide Access and Initial Assessment Standards in September 2007, the 'abuse likely to occur' allegation was removed as a maltreatment type for the entire state. The 'abuse likely to occur' allegation type was discontinued because it lacked a definition that would allow consistent

usage and make it clearly distinguishable from the other maltreatment types. It was found that the 'abuse likely to occur' allegation could be more appropriately categorized under one of the other maltreatment types to represent the risk of maltreatment, in most cases neglect. The 2008 data is the first calendar year with no 'abuse likely to occur' data.

#### Mutual Sexual Activity

Mutual sexual activity by minors is excluded from all data tables and figures which depict calendar year 2005 - 2010 data. Counts of mutual sexual activity was removed from reports in these years as there was concern over how this category was applied in maltreatment assessments. Mutual sexual activity by minors was added back into the data counts as of calendar year 2011 as the data concerns were eliminated at that point.

## APPENDIX E

<sup>1</sup> – Data about service referrals was compiled using the eWiSACWIS sm02x100 Access Report. Service referrals represent contacts and decision made where CPS issues were not identified as part of the report. Decisions about documentation of service referrals are not governed by statute and are determined by local agency practice.

<sup>1</sup> – 104 primary caregiver CPS initial assessment safety decisions were blank. Initial assessment (IA) primary caregiver includes the following types: IA Primary, IA Narrative and IA Primary – Alternative Response (AR).

## APPENDIX M

**Where to Report Child Maltreatment**

Listed below are the County Departments of Health and Human Services or Social Services that receive and assess child maltreatment reports. Such reports may also be made to law enforcement agencies.

Adams County Department of Health &  
Social Services  
108 E. North Street  
P.O. Box 500  
Friendship WI 53934-0500  
Office Hours: 608-339-3356  
After Hours: 608-339-3304

Buffalo County Department of Health &  
Human Services  
407 S. Second St.  
P.O. Box 517  
Alma WI 54610-0517  
Office Hours: 608-685-4412  
After Hours: 608-685-4433

Ashland County Department of Human  
Services  
630 Sanborn Ave.  
Ashland WI 54806  
Office Hours: 715-682-7004  
After Hours: 715-682-7023

Burnett County Department of Health &  
Human Services  
County Government Center  
7410 County Road K #280  
Siren WI 54872  
Office Hours: 715-349-7600  
After Hours: 715-349-2128

Barron County Department of Health &  
Human Services  
Government Center  
335 E. Monroe Ave., Room 338  
Barron WI 54812  
Office Hours: 715-537-5691  
After Hours: 715-537-3106

Calumet County Department of Human  
Services  
206 Court Street  
Chilton WI 53014  
Office Hours: 920-849-1400  
After Hours: 920-832-4646

Bayfield County Department of Human  
Services  
P.O. Box 100  
Washburn WI 54891-0100  
Office Hours: 715-373-6144  
After Hours: 715-373-6130

Chippewa County Department of  
Human Services  
711 N. Bridge Street, Room 306  
Chippewa Falls WI 54729  
Office Hours: 715-726-7788  
After Hours: 715-726-7788

Brown County Department of Human  
Services  
111 N. Jefferson Street
